Leaf Relief® brings real relief to homeowners who need a gutter protection solution that works ... every time.

Putting our extensive technical expertise to work along with today's most advanced technology, Leaf Relief® is proud to now offer two lines of patented products for both existing gutter systems and new gutter applications.

Here's the latest Leaf Relief® products ... Gutter Protection that Really Works:

#### **Series SN for new gutter applications**

Revolutionizing the gutter market, Leaf Relief® Series SN is specifically designed for new gutter applications. Its unique continuous hanging system outperforms traditional spikes or hangers. Leaf Relief® Series SN also prevents debris from infiltrating the gutter interior which can lead to deterioration and clogging.

#### **Series TP for existing gutters**

Existing gutters receive Leaf Relief®'s protection with the Series TP, featuring a flexible flap for a perfect, self-sealing fit.

Both the Series SN and Series TN are backed by our Never Clogs, Never Overflows warranty.

# The Benefits

## Patented Designs

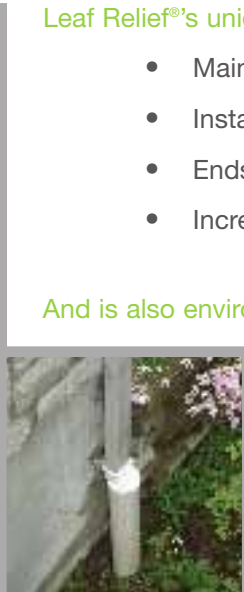

- Round perforations and a smooth finish prevent debris from sticking to Leaf Relief®'s surface. Plus, the patented **Aluma-Perf™** technology keeps leaves, needles, seeds and twigs out of gutters which are lifted away with a gentle breeze.
- The long length means fewer overlaps for a cleaner installation.
- Fewer overlaps mean less chance for debris to get in.
- Made of aluminum, Leaf Relief® products keep their shape, regardless of climate conditions.

# Quality and Innovation

## Leaf Relief®'s unique design:

- Maintains house appearance
- Installs without lifting shingles
- Ends gutter cleaning
- Increases the life of the gutter system

## And is also environmentally friendly because it

- Recovers rain water without debris
- Prevents debris from accumulating in the drain

# The Products

## New Gutters

 **LEAF RELIEF**<sup>®</sup> **Series SN**  
GUTTER PROTECTION THAT REALLY WORKS

- Revolutionizing the gutter protection market, Leaf Relief<sup>®</sup> Series SN products are specifically designed for new gutter applications.
- Its unique continuous hanging system outperforms traditional spikes or hangers and features all the advantages of our other Leaf Relief<sup>®</sup> gutter protection products.

## Existing Gutters

 **LEAF RELIEF**<sup>®</sup> **Series TP**  
GUTTER PROTECTION THAT REALLY WORKS

Existing gutters receive Leaf Relief<sup>®</sup>'s protection with the Series TP, featuring a flexible flap for a perfect self-sealing fit.

***Gutter cleaning days are over!***

# Attaching Gutters

There have been **spikes and ferrules...**

Hanger of the Past

There have been **hangers...**

Hanger of the Present

Now there is

Series SN5200S

## Series SN

For all new gutter applications

Series SN products install with rubber gasket screws that prevent water infiltration.

Hanger of the Future

Leaf Relief® SN

Common Spike and Ferrule System

# The One and Only Continuous Hanging System Offering Sturdiness and Protection

# Sturdiness

- Distributes weight evenly over the entire gutter length
- Supports up to 250 pounds per foot

**The Constancy, the Stability and the Resistance of a Continuous Hanger**

# Durability

- Proven rigidity withstands ice and snow falling from the roof
- Prevents debris from getting into drains
- Keeps gutters clean year-round

Prevents damage caused by ladders or water infiltration

Series TP5300

# LEAF RELIEF®

GUTTER PROTECTION THAT REALLY WORKS

## Series TP

Offers peace of mind with a gutter protection system that installs on existing gutters

For existing gutters

Leaf Relief® Series TP: the EFFICIENT ALTERNATIVE to expensive and temporary solutions. Gutter cleaning days are over!

# Quality • Effectiveness • Innovation

Leaf Relief® Series TP products for existing gutters feature a specially treated PVC flap:

- UV resistant
- Mold and mildew resistant
- Flexible under extreme weather conditions

This feature is unique and assures a perfect, self-sealing fit on each installation.

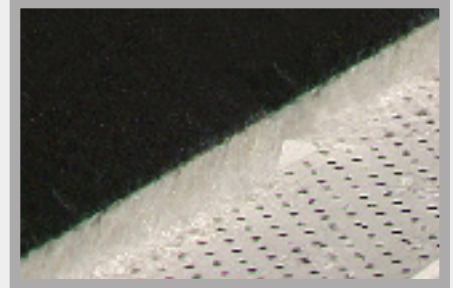

# FAQs

## Waterflow

***“How can water enter the gutter? There are not enough holes and they’re too small.”***

Extensive research and development led to our exclusive Aluma-Perf™ technology. The product has 489 perforations every 20 inches. This drains water at the same rate as a 2x3 downspout. Extensive testing proves that Leaf Relief® products can drain up to 32.9 inches of rainwater per hour; the highest amount of rainfall ever recorded was 12 inches of water per hour in Kilauea, Hawaii, in 1971.

*All tests have been performed by accredited independent laboratories, Intertek Testing Services NA Ltd and Architectural Testing.*

## Debris

***“Will leaves and small debris stay on the surface?”***

Leaf Relief®’s innovative Aluma-Perf™ technology keeps debris out of gutters, allowing continuous ventilation that blows leaves, seeds and twigs off its surface with a gentle breeze.

## Ice and Snow

***“What happens during winter?”***

Leaf Relief® products prevent snow from accumulating in gutters which keeps gutters from losing their shape because of the pressure created on the inner gutter by the weight of the snow.

***“Will there be ice damming on Leaf Relief®’s surface?”***

Never! Water drains directly into the downspout because there are no leaves or debris to stop it. With Aluma-Perf™ technology, Leaf Relief® products improve gutter system efficiency year-round.

Leaf Relief® products do not cause ice dams. If icicles form on roof edge, check the attic for proper ventilation and thermal insulation.
